Subject:	Re: Meeting Pavel/Materials

Thank you very much - of course I treat everything we do or discuss as confidential.

On another note - I realise that neither Guardicore nor Light Cyber are active in the mobile device space - they are both into large datacenter security, which is a complete different field. I'm sure it is very interesting to listen to some of these brains, but their focus is a very different one. I personally belief that cyber security issues are much more advanced in computers, servers and datacenters than they are in the fast growing mobile phone world. And I also believe that the mega growth will come from mobile devices. Everything we do sits on mobile devices (movements via GPS, phone calls, personal data)…..much less sits on servers these days, at least in the consumer space (as opposed to the business world of course). That's very different. Companies are concerned about company data, and individuals are concerned about personal data. Kaymera (and actually NSO) targets personal data and these guys are more "corporate" I think.

But I'm sure we'll learn something from them anyhow.

Have a safe flight - In case you are tired on friday, I'll grill them a bit.

best
Gary
